Re: Extenet Systems Application for Small Wireless Facilities
Structural Certification

Dear Ms. Lee,

Extenet Systems proposes to replace five (5) existing metal light poles with proposed combination wireless telecommunications/light poles, incorporating radio/antenna systems and attach wireless telecommunications radio/antenna systems and two (2) existing or replacement-in-kind wooden utility poles, within the City of Mission Hills. The specific pole types and proposed locations are included within the Extenet Systems application, submitted to Mission Hills on September 6, 2024.

This letter is to confirm that the proposed replacement metal poles, with the proposed attached appurtenances, shall be designed to meet or exceed the requirements of all federal, state and local construction codes and design standards, including, but not limited to AASHTO LRFD Structural Supports for Highway Signs, Luminaires, and Traffic Signals, and TIA-222H.

The wooden utility poles, or replacement-in-kind, as may be required to meet required utility clearances and/or replacements of structurally inadequate or deteriorated existing utility poles, shall be designed to meet all Evergy, federal, state and local construction codes and design standards, including, but not limited to NESC and TIA-222H.

If you have any further questions, please do not hesitate to contact me.

Kind Regards,

Robert Pietrocola, PE
